

PROJECT PROFILE

SEGMENTAL BLOCK FACING

Government > Baldwin High School in Pittsburgh, Pennsylvania

During renovation of the Baldwin High School, the Walltek Design Build, Inc. team constructed a 7,000 square foot wall system of Versa Lok units and a Mirafi geogrid that created a street entry way into and from the school.

Originally, the road was created as a service drive while contractors were expanding the building. However, now the road is a permanent fixture and makes getting to and from the high school easier. This additional entry way is also accessible for faculty, students and guests to the new indoor pool complex for competitive swim meets.
